INTRODUCTION

INTRODUCTION

MEDiLINE is a one-stop solution to all the medical services related problems, either you need an appointment, some daily checkups, medicines etc..it will be 24/7 available for all our needs.

PROBLEMS

Appointments

By now, we all face problems in booking the appointments, most of the hospitals don't book online so patients need to come there which creates rush.

Price comparing in aspects of lab tests or consultation fees

Whenever we need to check the prices of lab tests, we need to check one by one on internet which becomes very cumbersome.

Beds availability

During the need of hospital beds there is no any specific place for all to see that how many beds are available.

PROBLEMS

Emergency services

At the time of urgency , its become very difficult to call nearby ambulance..sometimes due to the delay situation becomes uncontrollable

Private clinics

Not all the patients go to the hospitals only, there are lots of private clinics of the doctors, need to search one by one their addresses availability etc..

Maintaining bills,lab-reports

Handling of all the pharmacy bills,records,lab-reports especially in long-term tedious becomes tedious for all of us.

PROBLEMS

One major problem

So one major problem which I have seen is that most old age people need to repeat their medicines every 1 or 2 months., due to this, they need to stand in the queues for the same written prescription medicines, get copies from the doctors and then get the same medicines which is very tiring for them.

PROTOTYPE

So, here we have **MEDiLINE** the one stop solution for all the medical related services

SOLUTIONS

Appointments and doctor's information

Patients will get the entire information either it is about appointment or they will also be able to check the doctors on the basis of their speciality

Online delivery of reports/medicines

In case the old patients or anyone need the same repeated medicines online delivery would be there ,likewise for the reports also

Emergency button on the top

There will be one emergency button on the top through which the gps location will be find and nearby ambulance will connect with the patient

SOLUTIONS

Beds availability

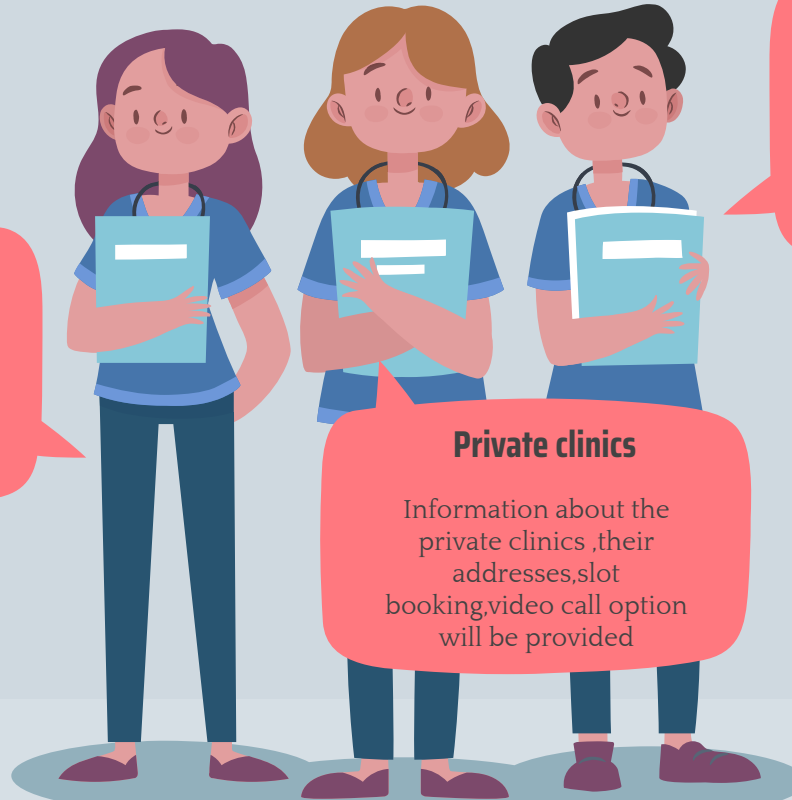

Separate sections to check the availability of beds to avoid unnecessary mess inside the hospital

Private clinics

Information about the private clinics ,their addresses,slot booking,video call option will be provided

Maintaining records of bills,reports

Separate pdf files including bills,lab-reports For easier access anytime or anywhere

PATIENT MEDICAL HISTORY

AGE: 25

GENDER: Female

ALLERGIES: None

LOCATION: Jaipur, Rajasthan

ENT problems ,patient has consulted with Dr.Suresh gupta and description of diseases

Consulted with Dr.Neerja sharma regarding neurological disease

Consulted with Dr.Anjali gupta regarding physiotherapy

2005

2008

2014

EXPECTED CHANGES

01

Easy access will be there for all the age groups. Connectivity would be there between hospitals, laboratories, private clinics and their respective information about locations

02

Mainly, the rush and the non-systematic system will become quite systematic by this, small laboratories and hospitals will also get a chance to get identified.

THANKYOU
